

## Management policy

Fagersta Stainless AB ensures - by means of its business management system - that the production of stainless wire from hot rolling and cold drawing, has controlled processes leading to continuous improvements within:

**Safety:** we prevent and limit the consequences of serious accidents

**Quality:** our products shall meet the requirements of our customers and certainly exceed expectations

**Environment:** we continuously work with minimizing and preventing environmental impact and pollution as well as improving our environmental performance

**Work safety:** we prevent risks for occupational diseases and accidents

**Energy:** we identify energy wastage and improve energy performance

We accomplish this through systematic procedures throughout the organization along with the work towards targets and objectives. We prevent nonconformities by identifying and handling risks efficiently. With continuous competence development we can assure adequate skill among all staff. The management makes sure we have enough resources. We keep surveillance on and follow all laws and other obligations that have an impact on the organization. Regular internal audits are used as a tool to measure conformity of obligations and to make sure we meet our policy and targets.
